

## Installing Read&Write Toolbar

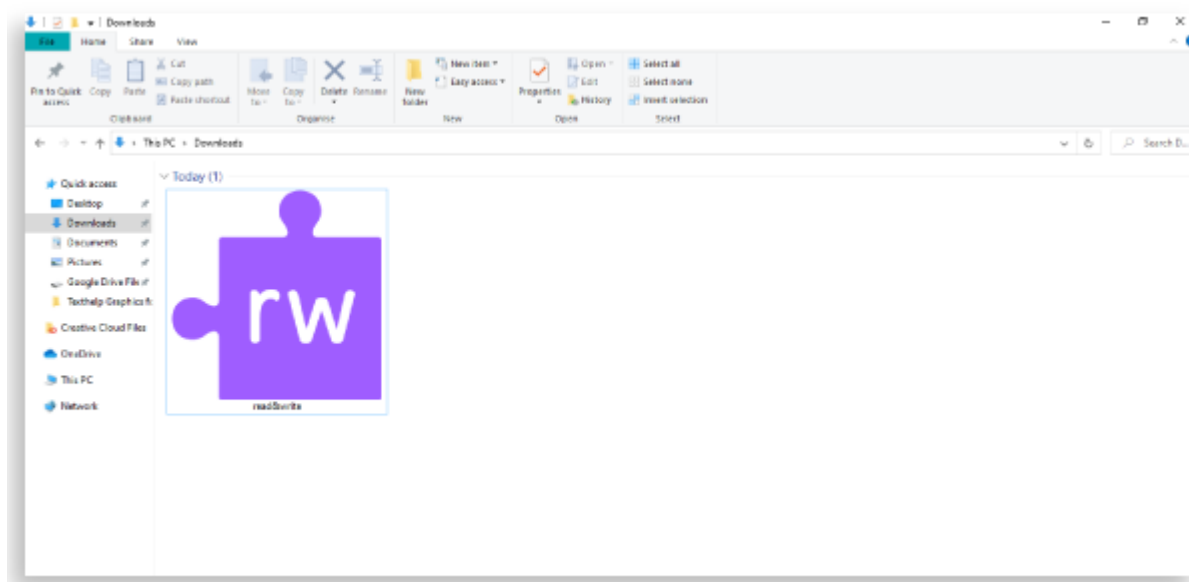

Visit [text.help/home-use](https://text.help/home-use) in your browser and click on 'Try Read&Write today'

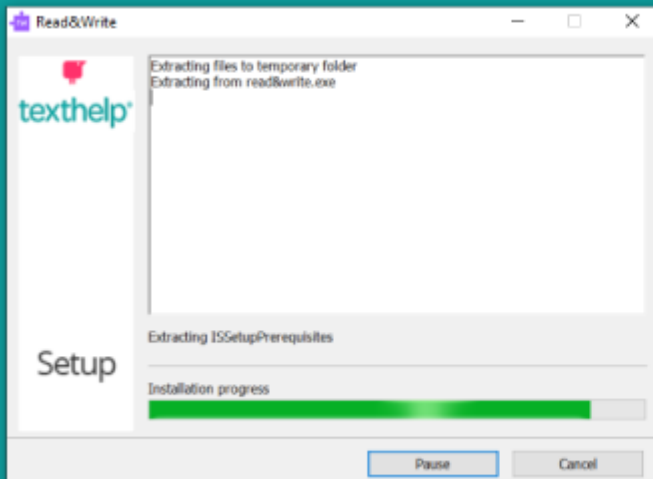

Select the Windows icon, then click on 'Read&Write (UK English)'. This will begin the download.

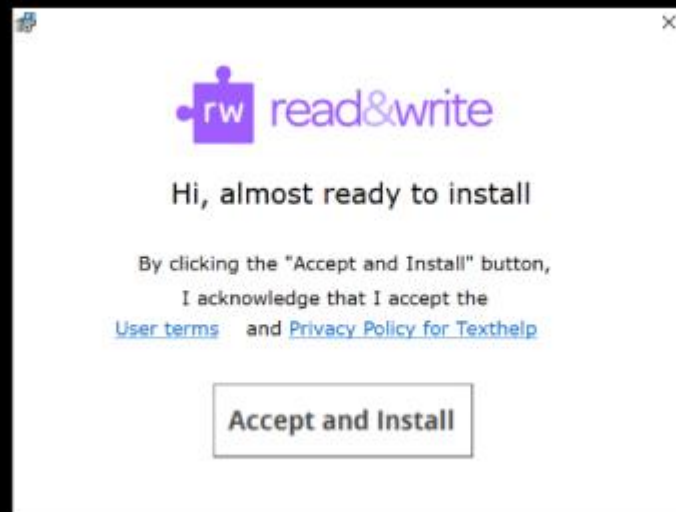

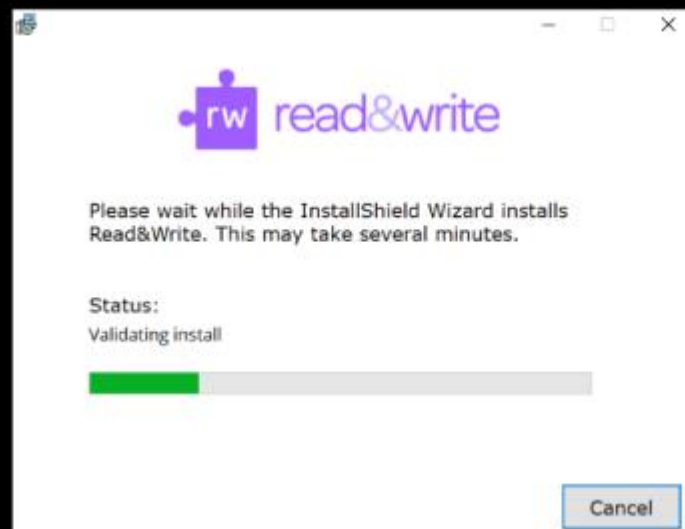

Locate the .zip file in your downloads folder and double click to open. You may need to double click the setup.exe file to run the install.

Follow the steps to complete the installation.

## Speed, distance and time

The concept of motion is described by using terms like velocity, speed, distance and acceleration. For a moving body, speed is the quantity by which we know how fast the body is moving.

Car Speedometer

A higher speed means an object is moving faster. A lower speed means it is moving slower. If it isn't moving at all, it has zero speed.

Speed is defined as the distance covered by a moving object in units of time taken.

Speed is a scalar quantity, it does not account for direction, while velocity is a vector quantity which is aware of direction. In other words, "The speed of an object can also be considered as the magnitude of the velocity of the object".
